

Phase-II confirmatory design: database-level isolation, 2×2 factorial + open-mechanism arm, three-layer admission

Data isolation

Phase-I discovery eval
151 q (overlaps dev use;
disclosed)

Phase-II development pool
(card_games + formula_1,
365 q — builders only)

Phase-II confirmatory test
9 never-opened DBs
1,169 q — frozen

Stratified core 400
(drawn pre-outcome,
subset of the 1,169)

Generation protocol (equal raw budget $R=3/\text{slot}$)

G=0
S=0
II-A
free
ungated

G=1
II-B
free
gated

S=1
II-C
forced
ungated

**II-D
forced
gated
(PRIMARY)**

II-E (secondary)
open mechanism:
self-specified
contract,
gated on own
declaration

Three-layer admission (gated arms)

6 builders × 3 seeds = 18 paired cells (all enter, incl. K=0)

1. neutral validity
(parse / import /
returns SQL)

2. counterfactual
conformance
(trace probes)

3. non-vacuity
(must be violated
by bare) — arm E
